

Steve Sarro, Pinehurst Country Club

I have seven reasons for Sanctuary products. They have become a staple in my program. Finally I don't need to look elsewhere (as long as the price is competitive). My membership appreciates the fact that they are reliable products that focus on playability.

- It doesn't stink like most organics. So applying any day of the week is easy.
- Application is easy, no need to water in right away which creates a wet golf course. I can spread it myself which means I do not have to wait for my suppliers schedule to open.
- I can apply the product in July and not have to apply again until late October.
- Soils have never been healthier and we have not seen a hint of disease activity since using Sanctuary.
- After year 2 of this program, I am needing less material. That's almost a \$4,000 saving on my property.
- No peaks and valleys in growth, consistent growth year round. I am also less dependent on growth regulators.
- Sanctuary's Synergy product is a great product for managing high stress areas. We are maintaining grass in areas that have not performed well in the past.

Dan Hawkins, CGCS
Flying Horse Golf Club

As a newly certified golf course with the Audubon Cooperative Sanctuary Program we feel it is important to implement and maintain an agronomic program that is in line with the requirements and goals of the ACSP. To this end, over the last 3 seasons we have been applying Sanctuary products to certain areas of our golf course to see how they perform compared to our current synthetic products. We have noticed a reduction in necrotic ring spot that was evident in sodded areas, nice even growth over the growing season and color that is consistent or better than other products we have been using. We plan to make the investment in the Sanctuary products and use them wall to wall on our property beginning in 2014.

Steve Whiting, CGCS
The Pinery Country Club

Among the countless soil amendments that are used to maintain healthy soils, The Sanctuary Products by far are the most beneficial component for supplementing those poor soils and week stands of turf. The Sanctuary feeds your soil resulting in optimal turf conditions and play-ability.

David Cahalane
The Golf Club at Bear Dance

The Golf Club at Bear Dance is one of the premiere public Colorado golf course. Over the past eight years I have applied Sanctuary 18-2-6, with great success. The most impressive quality of the product is its longevity. The one-time application in early June or July feeds the turf all season long. It allows for steady growth, quality turf and outstanding color well into the late season. This is an awesome product for any course looking to gain an edge on quality turf management.
