

2017 SANCTUARY MOWER & DROUGHT STRESS RECOVERY

The Sanctuary was contacted by a lawn care company regarding an extreme turf stress problem on one of their Long Island properties. The turf was mowed after the weather was rapidly changing from wet & cool to hot & dry. The photo shows the stress to the turf due to the tracking from the riding mower.

To correct the problem, Sanctuary 16-0-4 at 3 bags per acre was applied to the turf. Plus, Solucall Humid Plus with Sanctuary Detonation was also applied to the turf. After these product applications, the turf was watered. The photos show the before and after results from these applications. After just 2 weeks in extremely hot weather, the turf was fully recovered.
